

HOW TO INSTALL FONTS

01. If you're going to be using the font on a Microsoft app, go to your dock and hit quit.

Make sure you are closed out of *all* Microsoft applications.

02. Next hit the download button on the "Fonts" page on my website.

03. You'll see a bar at the bottom of your screen pop up with the download, drag the mini bar with the font's name on it onto your desktop.

04. Double click on the font zip on your desktop and a folder will appear. (Click on the "license!" note to view your license for this font!)

05. Double click into the folder and double click on the "Ag" displayed in the font.

06. You'll see a little box pop up on your screen, click "install font."

07. Your font library should appear. If it adds the selected font to your font library, you're good to go! You can use the font on Stickies, Microsoft applications, and other apps where custom fonts can be installed.

For Microsoft and Stickies: the fonts are automatically installed (as long as you quit Microsoft before!)
